SUMMARY

Third-year Computer Science and Artificial Intelligence student at IE University who ships working AI products end to end: public-data pipelines, LLM agents, machine learning models and full-stack web apps. Three hackathon and datathon builds in 2026, plus self-directed projects in computer vision, local LLMs and game development. Open to Summer 2027 internships.

EDUCATION

IE University — Madrid, Spain

BSc Computer Science & Artificial Intelligence — Third year — expected graduation 2027

- **Relevant coursework:** Machine Learning, Algorithms & Data Structures, Python, C, Java.

Nord Anglia International School — *International Baccalaureate Diploma* — Dubai, UAE · June 2024

Lycée Français International de Shanghai — *French curriculum* — Shanghai, China · 2011 – 2022

HACKATHONS & COMPETITIONS

ParkScan NL — *Vacant-property sourcing & AI outreach platform* — IE University Hackathon, 2026

- Full-stack web app mapping the Netherlands for vacant commercial buildings to convert to parking, cutting analyst work from 3–5 hours to about 15 minutes per building (live brief: SULC Advisors).
- Scored candidates 0–100 on vacancy and parking suitability from the BAG, PDOK and Kadaster open-data APIs; a Gemini 2.5 agent drafts a Dutch letter per owner, sent via n8n only after human approval. Node.js/Express, PostGIS, MapLibre, Puppeteer.

IE SciTech Sustainability Datathon — *Iberdrola & Aqualia challenges* — IE University, 2026

- Iberdrola — modelled the minimum number of EV charging points from road-network, station, adoption and grid-capacity data, flagging congestion areas and proposing reinforcement strategies.
- Aqualia — identified three emerging ESG material topics grounded in CSRD/ESRS and assessed their impact on risk, operations and strategy.

Vocable — *Web accessibility reading tool* — Cursor Hackathon, 2026

- Paste any link and the app extracts, cleans and reads the page aloud for users with impaired eyesight. github.com/issamarida/vocable

PROJECTS

VacancyOracle — *ML successor to ParkScan (computer vision)* — 2026 – Present

- Hand-labelled 701 Dutch commercial addresses and embedded 4,071 Street View images with SigLIP under a frozen evaluation protocol; zero-shot vision reaches 0.048 PR-AUC vs 0.032 (rules engine) and 0.024 (majority baseline). PyTorch, active learning.

Stylist — *Wardrobe AI agent (PWA)* — 2026

- Closet and event planner with “Daily Three” outfit recommendations, each explained by an AI layer. Next.js, Supabase (Postgres, storage, auth), shipped as an installable PWA.

SwellSync — *Surf & sail session logger* — IE University, 2026

- Flask + SQLite app with full CRUD, cross-domain stats, search and CSV export; whitelisted SQL sort keys, CSP and security headers, Docker deploy and 100% business-logic test coverage with pytest.

Fleeting Utility — *Narrative game in Godot 4* — 2026 – Present

- Isometric 2.5D game whose world is built entirely in GDScript code, with a state-machine perception system, shader-based scene transitions and an automated verification harness.

PC Builder Advisor — *Data-driven build recommender* — 2025 – 2026

- Compatibility scoring over a curated component dataset with a live price-scraper pipeline, build comparison and assembly checklist. Next.js + TypeScript, deployed on Vercel.

Personal Health & Activity Dashboard — *Self-hosted web app* — 2025 – Present

- Consolidates Fitbit sleep, workout and calorie data; a calorie tracker on a locally hosted LLM (Ollama) turns free-text meals into calorie and macro breakdowns with no third-party API.

UFC Matchup Prediction Model — *Machine learning coursework* — IE University, 2025

- Predicts the most competitive matchups from historical fighter and bout statistics using leak-safe rolling features; compared XGBoost, logistic regression and a neural network.

EXPERIENCE

Lefty — Software & Data Intern — Paris, France · March 2023

- Built a YouTube Data API program to detect and flag harmful video content for brand-safety screening, and contributed to influencer categorisation using ChatGPT and Instagram analysis for Lefty's luxury client portfolio.

Fotografiska — App Development Intern — Shanghai, China · May 2022

- Managed development of the museum's visitor app: researched comparable apps and ticketing systems, gathered requirements, curated exhibition content and supervised the programming work.

SKILLS & INTERESTS

- **Languages:** Python, JavaScript / TypeScript, SQL, C, Java, GDScript
- **AI & ML:** LLM integration (Gemini, OpenAI, Ollama), AI agents, prompt engineering, PyTorch, scikit-learn, XGBoost
- **Web & Data:** Next.js, Express, Flask, PostgreSQL / PostGIS, Supabase, SQLite, MapLibre, Puppeteer, n8n, Docker, pytest, Git
- **Certifications:** Harvard CS50. **Languages:** native English and French; proficient Spanish, Mandarin Chinese and Kabyle.
- **Interests:** football (first team; 2nd place at an international tournament in Thailand), basketball, surfing, sailing, hiking, painting, chess.
