Madrid, Spain | gamsoulas.ieu2024@student.ie.edu | github.com/gustaveems | github.com/totallynotgus

SUMMARY

Third-year Computer Science and Artificial Intelligence student at IE University who ships working AI products end to end: public-data pipelines, LLM agents, machine learning models and full-stack web apps. Two hackathon builds in 2026 plus self-directed projects running on local models.

EDUCATION

IE University

Madrid, Spain

BSc Computer Science & Artificial Intelligence

Third year — expected graduation 2027

- **Relevant coursework:** Machine Learning, Algorithms & Data Structures, Python, C, Java.

Nord Anglia International School — International Baccalaureate Diploma

Dubai, UAE · June 2024

Lycée Français International de Shanghai — French curriculum

Shanghai, China · 2011 – 2022

PROJECTS & HACKATHONS

ParkScan NL — Vacant-property sourcing & AI outreach platform

IE University Hackathon, 2026

- Full-stack web app that maps the Netherlands to find vacant or unused commercial buildings available for acquisition and turn them into parking-conversion proposals, cutting analyst work from 3–5 hours to roughly 15 minutes per building. Built to a live brief from SULC Advisors.
- Integrated three official Dutch open-data APIs — BAG (legal status, floor area, permitted use), PDOK (every property inside a user-drawn polygon) and Kadaster (registered ownership) — and scored candidates 0–100 on vacancy and on parking suitability.
- Implemented an AI outreach agent that drafts a personalised Dutch letter per owner from that building's live data, with n8n automation handling email delivery and a mandatory human approval step before anything is sent. Built on Node.js/Express, PostgreSQL + PostGIS, MapLibre, Gemini 2.5 Flash and Puppeteer-generated seven-page PDF dossiers.

IE SciTech Sustainability Datathon — Iberdrola & Aqualia challenges

IE University, 2026

- Iberdrola — Smart Electric Mobility: used public datasets on road networks, existing charging stations, EV adoption forecasts and grid capacity to model the minimum number of charging points required and flag grid congestion areas constraining deployment, proposing scalable reinforcement strategies.
- Aqualia — ESG materiality: identified three emerging material topics beyond Aqualia's existing ESG list, grounded each in CSRD/ESRS requirements, and assessed the implications for Aqualia's risk profile, operations and long-term strategy.

Vocable — Web accessibility reading tool

Cursor Hackathon, 2026

- Tool for users with impaired eyesight: paste any link and the app extracts the page content, cleans it up and reads it aloud, removing the need to navigate cluttered pages with a screen reader. github.com/issamarida/vocable

Personal Health & Activity Dashboard — Self-hosted web app

2025 – Present

- Built and maintain a personal web app that consolidates Fitbit data, sleep, workouts, calories and other hobby tracking into a single dashboard.
- Wrote a calorie tracker on top of a locally hosted LLM (Ollama) that parses free-text food entries and returns precise calorie and macro breakdowns, with no third-party API dependency.

UFC Matchup Prediction Model — Machine learning coursework

IE University, 2025

- Trained a model on historical fighter and bout statistics to predict the most competitive matchups to schedule.

EXPERIENCE

Lefty — Software & Data Intern

Paris, France · March 2023

- Built a YouTube Data API program to detect and flag harmful video content for brand-safety screening, and contributed to influencer categorisation using ChatGPT and Instagram analysis for Lefty's luxury client portfolio.

Fotografiska — App Development Intern

Shanghai, China · May 2022

- Managed development of the museum's visitor app: researched comparable apps and ticketing systems, gathered requirements, curated exhibition content and supervised the programming work.

TECHNICAL SKILLS

- **Languages:** Python, C, Java, JavaScript / Node.js, SQL
- **AI & ML:** machine learning, LLM integration (Gemini, Ollama, OpenAI), prompt engineering, AI agents
- **Web & Data:** Express, REST APIs, PostgreSQL / PostGIS, MapLibre, Puppeteer, n8n automation, Git
- **Certifications:** Harvard CS50. **Languages:** fluent French and English; proficient Spanish, Mandarin Chinese and Kabyle.
